erican Motors Javelin

s Guide

This is the RestorationEssentials factory-correct restoration guide for the 1973 AMC Javelin — one model, one year, nothing else. Every specification in this guide was checked against marque references, factory literature excerpts, and enthusiast documentation before it was written.

Our operating ethic is simple: we don't lie and we don't steal, we offer value. That means three things for this guide. First, no invented specifications — every number has a source. Second, where reputable sources disagree, the disagreement is disclosed in the text and in the Sources, Conflicts & Omissions section rather than papered over. Third, where a detail could not be verified, it is omitted and the omission is recorded — an honest gap beats a confident fabrication.

How to use this guide: start with the VIN and fender-tag (or door data plate) decoding sections to establish exactly what your car was when it left the factory. Use the engine, transmission, axle, paint, and casting sections to verify that what is on the car today matches what should be there. Use the rust and restoration-sequence sections to plan the work. And keep this guide in the shop — it is a working document, not a coffee-table book.

A final note: these cars are sixty years old. Parts have been swapped, tags have been lost, and memories have faded. Trust

the metal — casting numbers, date codes, and stampings — over stories. When in doubt, photograph everything and verify

against the factory service manual for your year.

1. Manufacturer History: American Motors

American Motors was formed in 1954 by the merger of Nash and Hudson — the last independent American automaker of consequence, a company that survived by being cleverer than the Big Three rather than bigger. Under George Romney, AMC found its identity: the Rambler, an honest compact that sold on value while Detroit sold on size.

AMC's performance era arrived in the late 1960s. The 1968 Javelin and AMX gave AMC a genuine pony car and a two-seat sports car, both powered by the new AMC V8 family (290/343/390). The 1969 SC/Rambler — built with Hurst — was AMC's drag-racing statement: a 315-horsepower 390 in the compact Rogue body with red-white-and-blue paint, built to dominate NHRA's F/Stock class. It did.

AMC's engineering was genuinely innovative: the unit-body construction, the 1966 V8 family with its thin-wall casting, and — from 1970 — the purchase of Jeep, which would eventually be AMC's salvation and legacy. For the restorer, AMC's small production volumes mean thinner reproduction support than the Big Three, but a passionate marque community and the American Motors Owners Association.

AMC survived as an independent until 1987, when Chrysler bought the company — mostly to get Jeep.

The 1968-1974 performance cars (Javelin, AMX, SC/Rambler, Rebel Machine) are the heart of AMC collecting: low production, high character, and still attainable. Factory-correct restoration rewards patience and marque-community connections.

2. Model History: American Motors Javelin

The Javelin was American Motors' answer to the Mustang — and it arrived with unusual drama. In 1966 AMC showed two 'Project IV' concept cars, the Vignale-built fastback and convertible, touring the auto-show circuit; the production Javelin's coke-bottle styling, by Dick Teague's team, kept the concept's promise. The Javelin went on sale September 26, 1967, as a 1968 model: a 109-inch-wheelbase four-seat pony car with the new thin-wall AMC V8s, priced under the Mustang and aimed squarely at younger

MC had never reached.

The Javelin was always the thinking man's pony car — the one Car and Driver compared favorably to cars costing half again as much. The SST trim added the luxury touches; the 1969 Big Bad colors gave it the wildest factory paint in the industry; and the Trans-Am racing program (1968-1970) put AMC on road-racing podiums against the Mustang, Camaro, and Challenger. The Mark Donohue Javelin of 1970 — 2,501 cars with the Penske driver's signature on the rear spoiler — is the most famous special-edition Javelin ever built.

For 1971 the Javelin was redesigned on a 110-inch wheelbase with bolder, more sculpted styling, the Javelin AMX replaced the two-seat AMX as a trim level, and the 401-cubic-inch V8 became the top engine. The 1972-1973 cars carried the design through the industry's transition to net horsepower ratings. The Javelin ended after 1974, but the 1968-1973 cars in this series cover the classic era: the original coke-bottle cars and the bold second generation at the peak of AMC's performance ambition.

3. What Makes the 1973 Unique

The 1973 Javelin is the final year of the classic era — the last Javelin before the 1974 restyle, and the last year the big-cube performance formula was fully intact. The engine lineup carried over from 1972: 232 and 258 sixes, the 304 (150 net), the 360 (175/195 net), and the 401 (255 net). The Javelin AMX continued with the 360 standard and the 401 optional, and the Pierre Cardin interior remained the wildest factory interior in the industry.

1973 brought the federally mandated 5-mph front bumper, which changed the Javelin's nose — the 1973-only bumper and grille details are the visual identifier, and they do not interchange with 1971-1972 in their specifics. The 1973 cars also carried the full 1973 emissions equipment, which the restorer must understand before touching the engine bay: smog equipment is year-specific, and deleting it destroys both correctness and value.

The 1973 model year was the Javelin's second-best of the second generation: 30,902 cars (25,195 Javelin + 5,707 AMX) — the AMX trim's best year ever, which makes the 1973 Javelin AMX the most available of the 401-era performance Javelins. The 401 cars remain the blue-chip 1973 Javelins, with the Cardin-interior AMXs close behind.

For the restorer, the 1973 Javelin's traps are the bumper-year details (1973-only nose hardware), the emissions equipment (year-specific and correctness-critical), the Cardin-interior authentication, and the 1973 American Motors Javelin

usual VIN/data-plate verification: verify the engine code, the trim code, and the build date before paying any AMX, 401, or Cardin premium. The 1973 is the most usable classic Javelin — buy the best-documented car you can find.

Year-to-year changes at a glance.

- 5-mph front bumper — 1973-only nose details.
- Full 1973 emissions equipment — year-specific and correctness-critical.
- Pierre Cardin interior continues; Javelin AMX's best year (5,707).
- Production: 30,902 cars — last year of the classic era.

4. VIN Decoding

1973 Javelin VINs read A3M797_ with the year-specific engine code. Verify the series and engine positions against 1973 AMC literature.
