Single-year coverage. Factory-correct specifications. No guesswork.

SAMPLE EXCERPT — full guide available at the link on the cover sheet

About This Guide

This is the RestorationEssentials factory-correct restoration guide for the 1958 Studebaker Hawk — one model, one year, nothing else. Every specification in this guide was checked against marque references, factory literature excerpts, and enthusiast documentation before it was written.

Our operating ethic is simple: we don't lie and we don't steal, we offer value. That means three things for this guide. First, no invented specifications — every number has a source. Second, where reputable sources disagree, the disagreement is disclosed in the text and in the Sources, Conflicts & Omissions section rather than papered over. Third, where a detail could not be verified, it is omitted and the omission is recorded — an honest gap beats a confident fabrication.

How to use this guide: start with the VIN and fender-tag (or door data plate) decoding sections to establish exactly what your car was when it left the factory. Use the engine, transmission, axle, paint, and casting sections to verify that what is on the car today matches what should be there. Use the rust and restoration-sequence sections to plan the work. And keep this guide in the shop — it is a working document, not a coffee-table book.

A final note: these cars are sixty years old. Parts have been swapped, tags have been lost, and memories have faded. Trust

the metal — casting numbers, date codes, and stampings — over stories. When in doubt, photograph everything and verify

against the factory service manual for your year.

1. Manufacturer History: Studebaker

Studebaker began in 1852 as a blacksmith and wagon-building shop in South Bend, Indiana, and by the turn of the century it was the largest wagon maker in the world. It entered the automobile business in 1902 with electrics and 1904 with gasoline cars, and by the 1920s it was a major independent automaker. The Depression nearly killed the company; a 1933 reorganization saved it, and after the war Studebaker's Raymond Loewy-styled 1947 models — 'first by far with a postwar car' — and the breathtaking 1953 Starliner coupes gave it the most beautiful cars in America. But the Ford-General Motors price war of the early 1950s bled every independent dry, and by 1954 Studebaker was desperate.

In 1954 Studebaker merged with Packard, forming the Studebaker-Packard Corporation. The merger saved neither company: by 1956 the combined firm was nearly bankrupt, Packard's Detroit factory closed in 1956, and Packard-badged cars became Studebakers in fancier dress until the Packard name died after 1958. Out of this turmoil came the Hawk line (1956-1964) — the 'family sports car,' a personal-luxury coupe built on the 1953 C/K platform, running from the four-model 1956 lineup through the supercharged Golden Hawks to Brooks Stevens' 1962 Gran Turismo Hawk.

Studebaker's engineering signature was honest and durable: the 259/289-cubic-inch V8 family (1955-1964), Borg-Warner-sourced transmissions (the Flightomatic automatic, the T-10 four-speed), Dana rear axles with the TwinTraction limited-slip differential, and — from 1963 — Paxton supercharging (R2) and front disc brakes on the performance models. For the restorer, the Studebaker Drivers Club (SDC), Turning Wheels magazine, and the Studebaker National Museum in South Bend — which holds the 1958 Studebaker Hawk

factory production orders used to authenticate individual cars — are essential resources.

South Bend automobile production ended on December 20, 1963; Canadian production, using Chevrolet-built engines, continued through 1966. The Hawk died with South Bend — no Hawks were built in Canada. Survivors are rare, reproduction support is community-driven rather than corporate, and factory-correct restoration depends on production-order documentation and marque knowledge in a way

ree car requires.

2. Model History: Studebaker Hawk

The Hawk line began in 1956 as Studebaker-Packard's 'family sports car' — four personal-luxury coupes built on the 1953 C/K platform: the Flight Hawk (six-cylinder economy), the Power Hawk (259 V8), the Sky Hawk (289 V8 hardtop), and the Golden Hawk (Packard 352 V8, 275 horsepower). It was a desperate company's boldest move: one platform, four personalities, from economy to genuine performance. The 1956 Golden Hawk — with its Packard V8, the biggest engine in the line — was the fastest Studebaker ever built to that point.

For 1957 the range was cut to two: the Silver Hawk (six or V8) and the Golden Hawk — now with Studebaker's own 289 V8 and a McCulloch supercharger, still rated 275 horsepower. The 1957 Golden Hawk is the legendary one: supercharged, finned, and fast, the car that kept Studebaker's performance reputation alive through the company's darkest years. For 1958 the Packard Hawk joined — a Studebaker Golden Hawk in Packard dress, built for the dying Packard dealer network — making 1958 the only year with three Hawk nameplates.

The 1959-1961 Silver Hawks (covered in the companion guides) carried the line through the Lark era as the company's sole remaining coupe. Then Brooks Stevens — the industrial designer Studebaker hired on a shoestring — restyled the Hawk for 1962 as the Gran Turismo Hawk: fins deleted, roofline cleaned up, interior modernized, Thunderbird-style roof. The 1962 GT Hawk was a sensation — the best-looking Studebaker in years, and the sales showed it. For 1963-1964 the GT Hawk could be ordered with the Avanti's R1 (240 hp) and R2 (290 hp, Paxton-supercharged) engines, front disc brakes, and the four-speed — the ultimate Hawks, built as South Bend counted down its final months. Production ended December 20, 1963, when South Bend closed; the 1964 Hawks were the last.

3. What Makes the 1958 Unique

The 1958 Hawk is the three-nameplate year — the only year Silver Hawk, Golden Hawk, and Packard Hawk were built side by side. The Packard Hawk was a Golden Hawk in Packard dress: supercharged 289, 275 horsepower, with Packard's catfish-mouth grille, fake spare-tire side trim, and the most baroque styling ever bolted to the C/K platform. It was built for the dying Packard dealer network — 588 cars, the rarest Hawk nameplate ever offered.

The 1958 Golden Hawk continued the supercharged 289 formula (275 horsepower); the Silver Hawk continued with the 185 six, 259, and 289. The 1958-only details — the quad headlamps, the revised fins, 1958 Studebaker Hawk

the Packard Hawk's unique front and side trim — are the restoration trap: 1958 trim does not interchange with 1957 in its specifics, and Packard Hawk trim is hen's-teeth rare. Verify every trim component against 1958 literature and survivor cars.

Production: Silver Hawk 7,350 (SDC table: 6,023 South Bend + 590 Canada + 737 export; the Studebaker National Museum breaks it as 2,442 six-cylinder and 4,905 V8), Golden Hawk 878, Packard Hawk 588 — 8,816 total. One secondary source reports approximately 8,230 total — see Conflicts. The Packard Hawk is the blue-chip 1958 Hawk; the Golden Hawk is close behind.

For the restorer, the 1958 Hawk's verification chain is the serial plate, the firewall body tag, and the production order: order it before paying any Golden Hawk or Packard Hawk premium, because both are cloned from Silver Hawks. The Packard Hawk's Packard-specific trim and badging must be supported by the production order — a Golden Hawk with a catfish grille is a tribute, not a Packard Hawk.

Year-to-year changes at a glance.

■ Packard Hawk joins — the only three-nameplate Hawk year (588 built, the rarest Hawk).
